About Me

I started doing web development as a hobby, but as I got more immersed in my projects, I decided I wanted to make a living from it. The main reason for my decision was that I could express myself through it, it required creativity and I could constantly learn something new. Last but not least, what I create will be readily available to everyone right away.

Projects

Personal website (http://vellyus.com)
The site basically evolves as my coding skills grow. It contains every project that I did while learning to code and I write a blog about my journey.

Music Player web app (https://vellyus.github.io/music_player)
A music player app, with which the user can create a playlist from the songs I like. Other songs can be added by pasting in YouTube links. The app works with JavaScript (without libraries) and mainly consists of manipulating DOM elements.

Weather web app (https://vellyus.github.io/weather)
A weather app that works with a web API. You can use it with location or you can search for a city. It also shows the local time of the searched location. Based on the browser's language the app can display the content in hungarian or in english.

Skills and Education

HTML | CSS | Bootstrap | JavaScript | Node.js | Express | Git

Self taught + Online courses - Treehouse (https://teamtreehouse.com)

Language skills :
English - intermediate level
German - basic level
